supercut lasting burs

One-piece tungsten carbide

Excellent finish and long life

FHD.104.016

FHD.104.010

FHD.104.022

FHD

Available diameters:
From 008 to 023

Unique in the world, the Fresissima FHD are made with a special, very compact and extra hard monobloc tungsten carbide.

For the setter: the special shape with the lateral angle of 85° allows you to create a seat that reproduces the exact shape of the stone to be set. The very careful sharpening and the modified angle of the blade allow to obtain a very well finished surface.

Amazing durability, one FHD Fresissima can replace 25 to 30 common cutters made of steel.

The only one with a lateral angle of 85°
