# FHH8

**ABSOLUTE NOVELTY FOR SETTING** Unique in the world, FHH by Fresissima are made of a compact and extra hard monoblock tungsten carbide.

It's extremely thin shape facilitates the stone setter's work, while the very accurate sharpening and the modified angle of the blades allow to obtain a surface comparable to what is obtained using the burin.

The special versions, FHH8 and FHH10, have fewer blades and have been specifically developed to work on platinum, gold/palladium and titanium.

Remarkable durability, an FHH by Fresissima can replace from 25 to 30 common steel burs.
