

Fair. Transparent.
Value-adding.

Precious Metal Recycling

Welcome to Bauer Walser

Expertise in precious metals – for over 100 years

Since 1924, Bauer Walser has stood for **reliability, professional expertise and a partnership-based approach in the precious metals industry**. What began as a family business has, over the decades, developed into one of Europe's leading suppliers in the precious metals processing sector.

Since the 1970s, alongside the production of semi-finished precious metal products, we have consistently specialised in the processing of precious metals and precious metal-containing waste materials. As a result, we now combine recycling, analysis, refining, production and precious metal trading under one roof. For our customers, this means: maximum transparency, the highest analytical accuracy and fair, direct payment – without unnecessary middlemen.

Our product portfolio comprises an extensive range of semi-finished precious metal products, enabling us to offer comprehensive solutions from a single source – from recycling to the finished material. We have continuously developed and expanded our expertise in precious metal recycling over the decades. This enables us to offer our customers optimal results and first-class service at all times.

Using state-of-the-art laboratory technology, innovative processes and an experienced team, we guarantee the careful and efficient processing of materials containing precious metals. Honesty, quality and trust are our top priorities.

Bauer Walser AG is wholly owned by the Bauer Walser Foundation. This stable ownership structure underscores our long-term focus and provides a particularly secure foundation for sustainable growth, reliability and trust.

Bauer Walser – Your trusted partner for sustainable precious metal recovery and genuine value.

- ✓ **Personal Precious Metals Account** your precious metals are credited to your account, with flexible withdrawal options at the daily market rate or delivery in the form of bars

Certified quality and responsible business practices

Responsibility you can see and trust

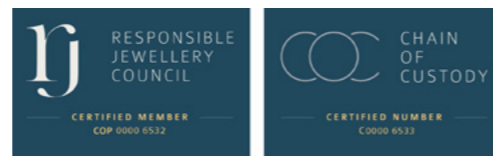

Tradition, quality and sustainability have always shaped our thinking and actions. This foundation combines decades of experience with a commitment to acting responsibly, both today and in the future – for our customers, our partners and our environment.

What drives us is more than just quality. It is the awareness that every material, every process and every product is part of a greater responsibility. That is why we adhere to the highest standards and have our practices audited transparently.

Our certifications to DIN EN ISO 9001 and ISO 13485 stand for reliable processes, uncompromising quality and continuous improvement. They reflect our commitment to ensuring the highest levels of precision and safety in every detail.

We are particularly proud of our compliance with the strict standards of the Responsible Jewellery Council (RJC) – as set out in the Code of Practice (COP) and the Chain of Custody (COC). Whilst the COP confirms our responsible conduct in ethical, social, human rights and environmental matters, the COC ensures full traceability throughout the entire supply chain for gold, silver and platinum group metals. This provides transparent proof that the metals used come from responsible sources. Please feel free to contact us specifically regarding CoC materials.

This is how trust is built – not through words, but through lived values, verified quality and genuine responsibility.
